Rank in suicide rate for 1979 through 2006. (Highest rate is No. 1.) See note at bottom for methodology and credits.	State	County	Suicide rate per 100,000 people per year 1979-2006	Average suicides per year in years with data 1979-2006	Total suicides in years with data 1979-2006	Maximum suicides 1979-2006	Minimum suicides 1979-2006	Average population in years with data 1979-2006	Years of data 1979-2006 (max=28)
		Notes on the data:							
		1. Suicide data come from the Centers for Disease Control and Prevention, National Center for Health Statistics. Compressed Mortality File, 1979-2006. Population estimates from the U.S. Census Bureau.							
		2. Analysis by Bill Dedman, msnbc.com. Send questions to bill.dedman@msnbc.com.							
		3. No information is reported for some counties in some years, particularly in smaller counties, because of confidentiality concerns. Averages reflect only the years for which data were reported.							
		4. Population figures for 2005 do not reflect the exodus after Hurricane Katrina.							
		5. The county attached by the CDC to a particular suicide is the county of residence, not the county where it occurred.							
		6. We included all deaths as long as the underlying cause of death was listed as intentional self-harm. It doesn't matter what the means of suicide was, as long as the coroner or other authority put down suicide as the underlying cause of death.							
		7. These death rates are "raw" rates, not adjusted to try to take into consideration ages, races, religions, drug use, etc.
